

Maxthomas Murray

Full-Stack Software Engineer

Bangkok, Thailand | +66 (64) 650-4306 | maxmurr.m@gmail.com | github.com/maxmurr | linkedin.com/in/maxmurr | maxmurr.com

PROFESSIONAL SUMMARY

Full-stack software engineer building production AI features and type-safe web applications. Focused on retrieval-augmented generation (RAG) and LLM evaluation on TypeScript and Next.js stacks, shipping products that span national-scale live events and enterprise platforms. Works test-driven, leaning on automated tests to keep architecture clean and code maintainable.

PROFESSIONAL EXPERIENCE

Mid-level Software Engineer, Innovative Extremist Jan 2025 – Present

- Raised retrieval accuracy to ~95% on an 81-case evaluation set for an enterprise AI chat application on open-source LLMs, iterating a user-feedback loop over the retrieval-augmented generation (RAG) pipeline; client demos generated new business leads.
- Built the [Thai PBS Election '69](#) results dashboard (TanStack Start, React 19) serving 200,000+ peak concurrent viewers across 77 provinces on election night, with live result polling and a drag-and-drop coalition builder; delivered the prior [Election '68](#) site (Next.js) at the same scale.
- Shipped two type-safe TypeScript products for enterprise client Allianz Ayudhya, a mobile-first agent portal and a sales analytics dashboard (Next.js, tRPC on Fastify, Drizzle, PostgreSQL, Redis), replacing on-request Excel reports for large offices with self-service analytics every agent can track, delivered in under four months.
- Engineered ByteArk Lighthouse, a video-streaming analytics platform on a Next.js backend-for-frontend with tRPC, surfacing AI-generated insights (Vercel AI SDK, Dify) that lead with most-watched content and peak viewing times.
- Led internal AI-tooling workshops on Claude Code across three engineering teams, with 90% of engineers adopting it effectively in their workflow.

Junior Software Engineer, Innovative Extremist May 2024 – Dec 2024

- Created [byteark-player-angular](#), an open-source Angular and Video.js player library for ByteArk, expanding streaming-partner compatibility as a reusable public package.
- Launched the [Playboard](#) video-platform UI (Next.js, Tailwind CSS), adding custom domain and subdomain support for customer-branded deployments.

Software Engineer Contractor, Innovative Extremist Oct 2023 – Apr 2024 • Part-time

- Reduced bundle size 30% on the Property Perfect real-estate platform by replacing Redux with Zustand, then added route-level lazy loading and image preloading, lifting the PageSpeed performance score from under 50 to 80.

Freelance Software Engineer, Mixay Paradise Hotel Jul 2023 – Dec 2023 • Part-time

- Built a full-stack property management system (PMS) for [Mixay Paradise Hotel](#) in Laos, cutting monthly accounting time from 10 hours to 2. Led user research with hotel staff to surface workflow bottlenecks, then delivered the data models, REST APIs, and internal design system now used daily by front desk and management.

PROJECTS

[react-grep](#) — developer tool that overlays React component names and source file locations on any element: hold Cmd to inspect, tap Shift to toggle source, click to copy. Zero runtime dependencies. Built with React and TypeScript. Live at react-grep.com.

SKILLS

Languages: TypeScript, Python

Frontend: React, Next.js (server-side and static rendering), TanStack, Tailwind CSS, Zustand

Backend & Tooling: Node.js, Bun, Fastify, Hono, tRPC, Prisma, Drizzle ORM, PostgreSQL, Redis, Vercel AI SDK

AI & Automation: LangFuse, Dify, retrieval-augmented generation (RAG), LLM evaluation, agentic workflows

DevOps & Testing: Docker, GitHub Actions, CI/CD, Cypress, Playwright, Vitest

EDUCATION

Bachelor of Science in Computer Science, Kasetsart University Jul 2020 – Aug 2024
